

When clicking the Initialize button in VS Code
a new local GIT repository is created

This is the same as typing "git init" in the
terminal or command prompt

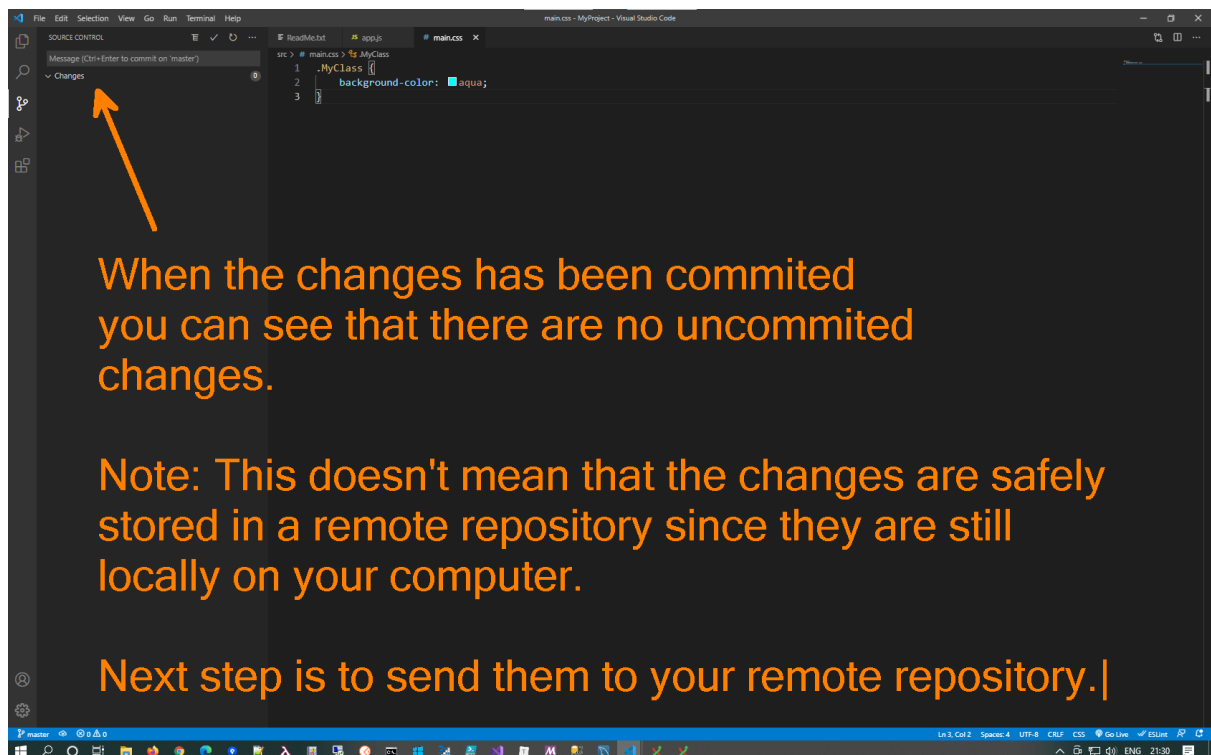

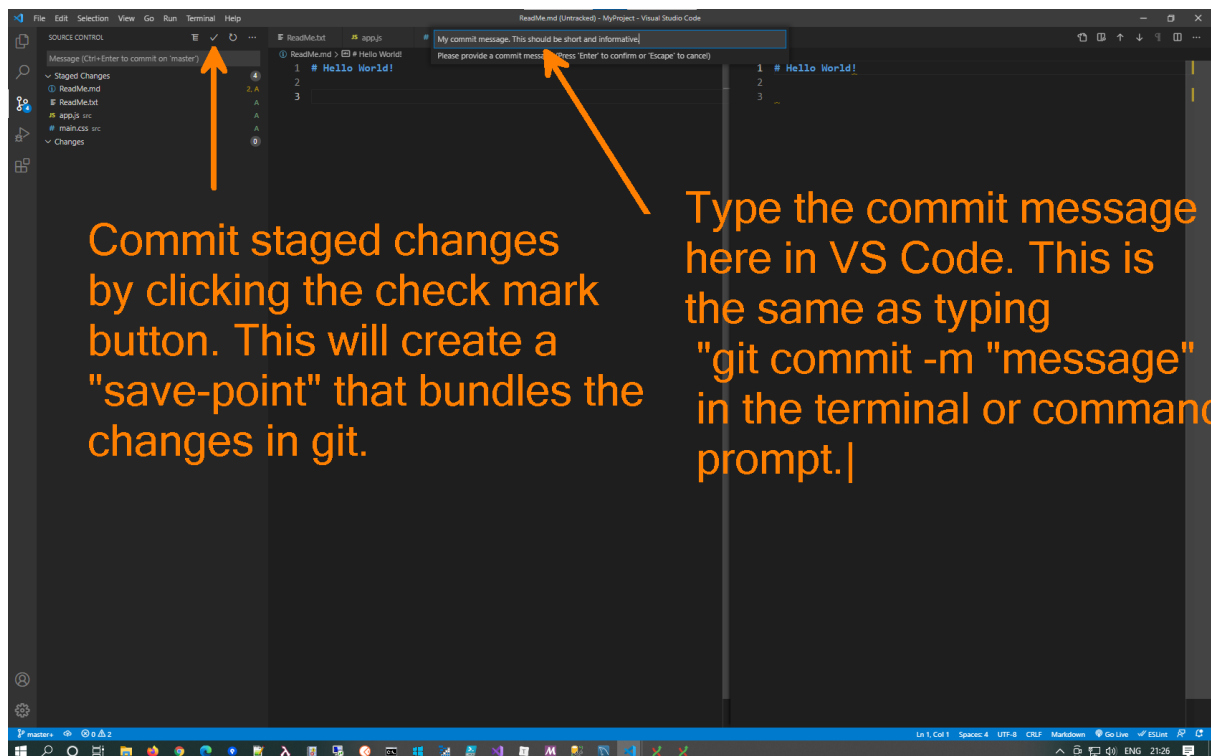

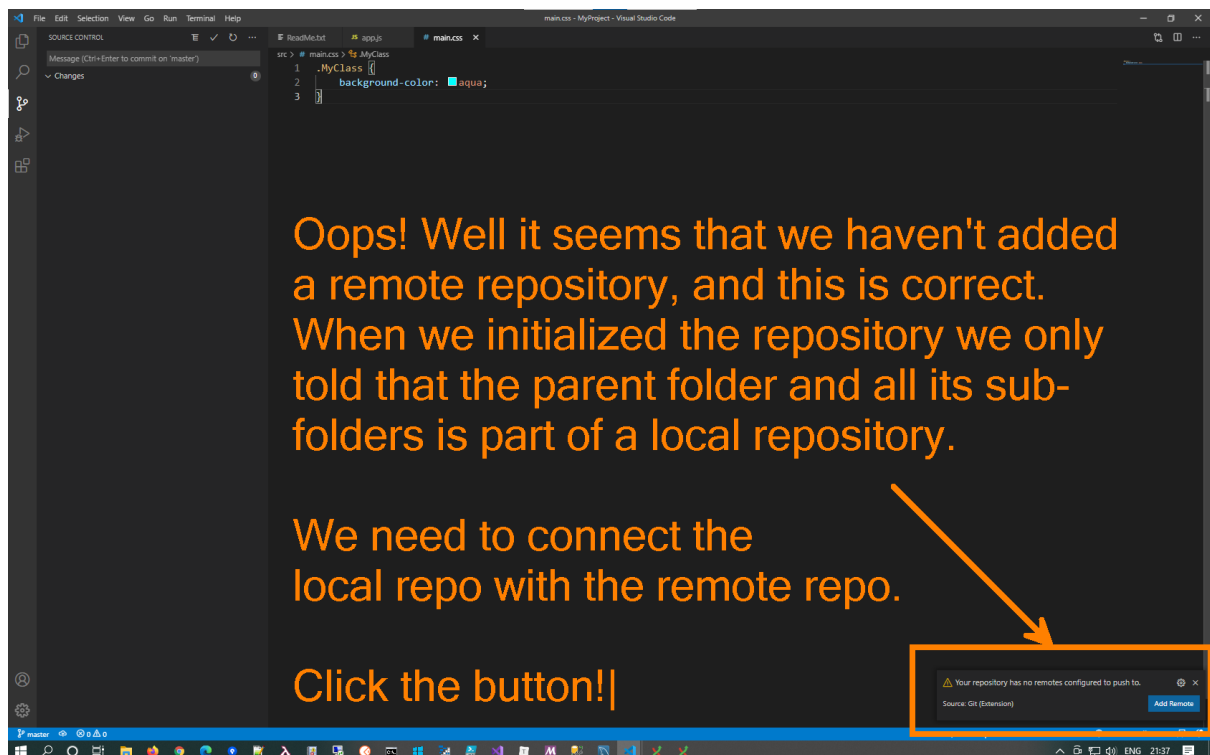

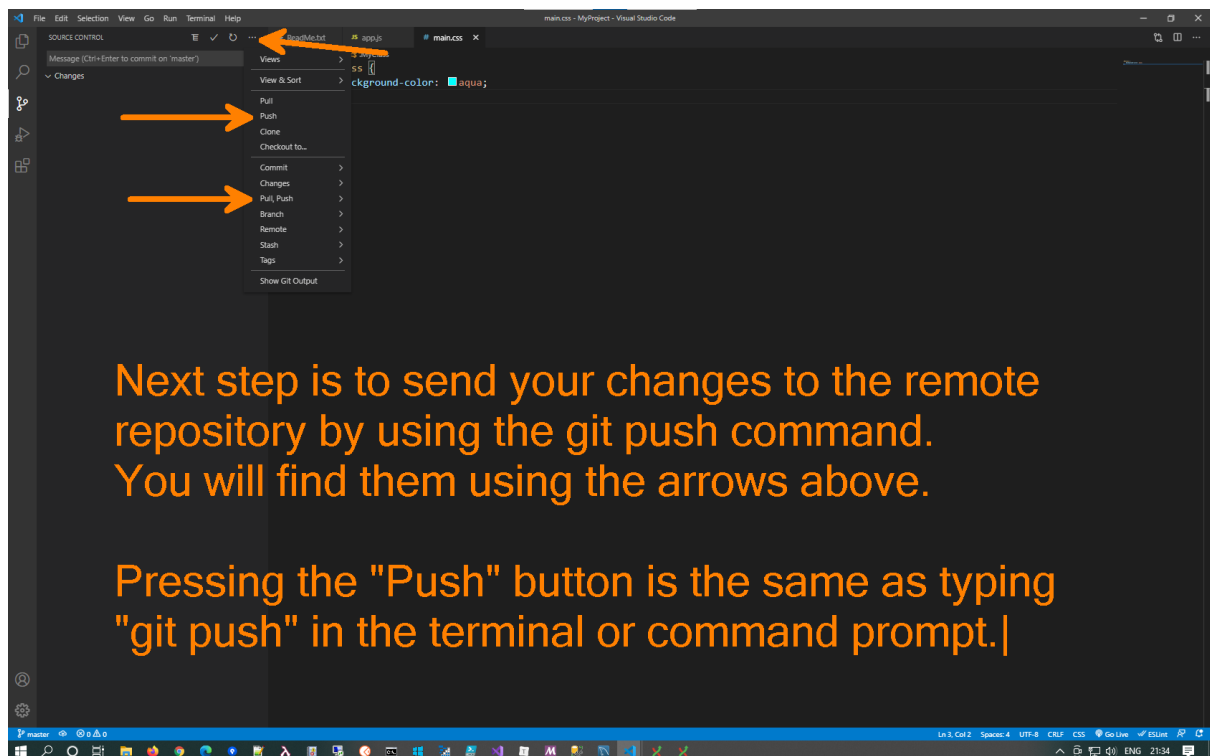

Stage file by pressing the + button
This will instruct GIT to add the file to the
index/repository|

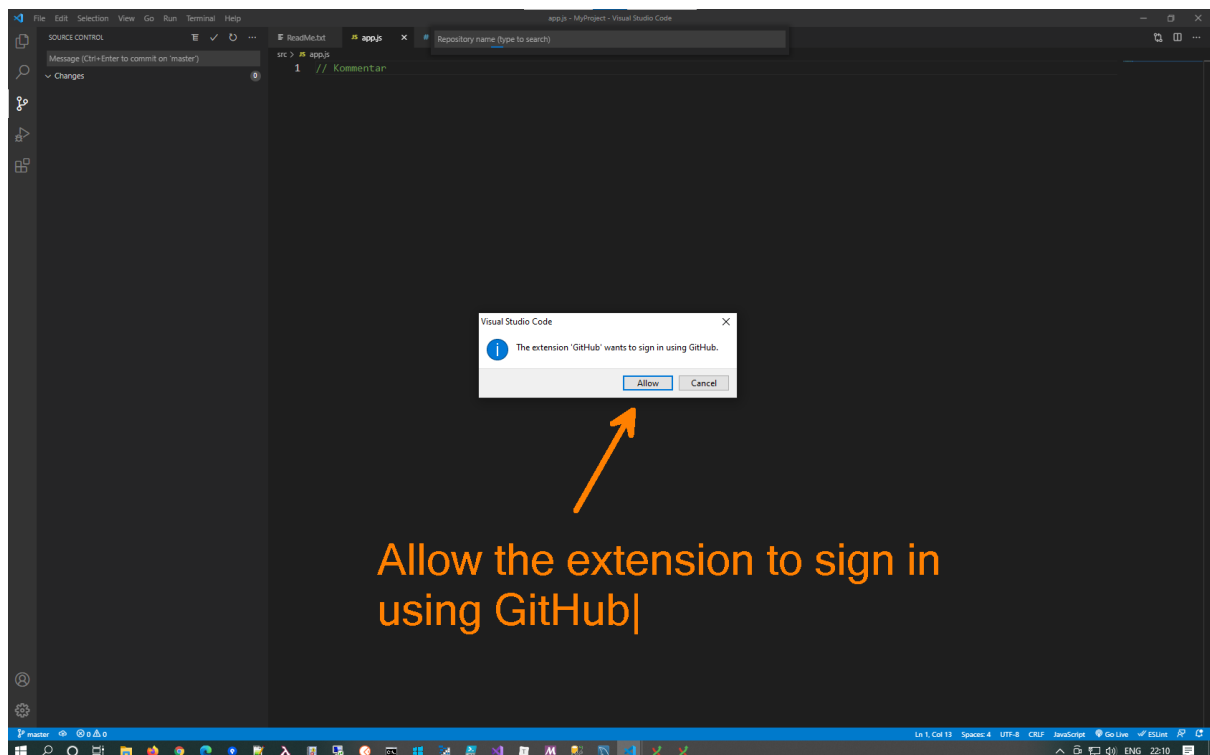

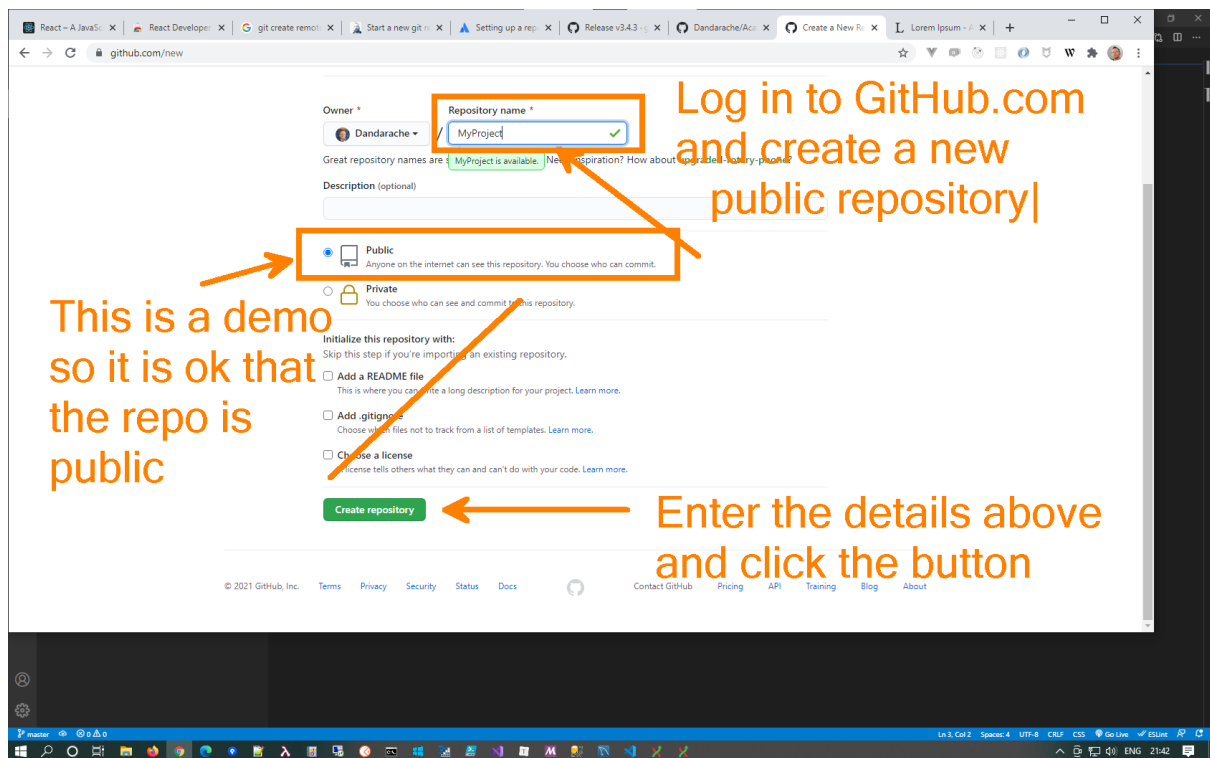

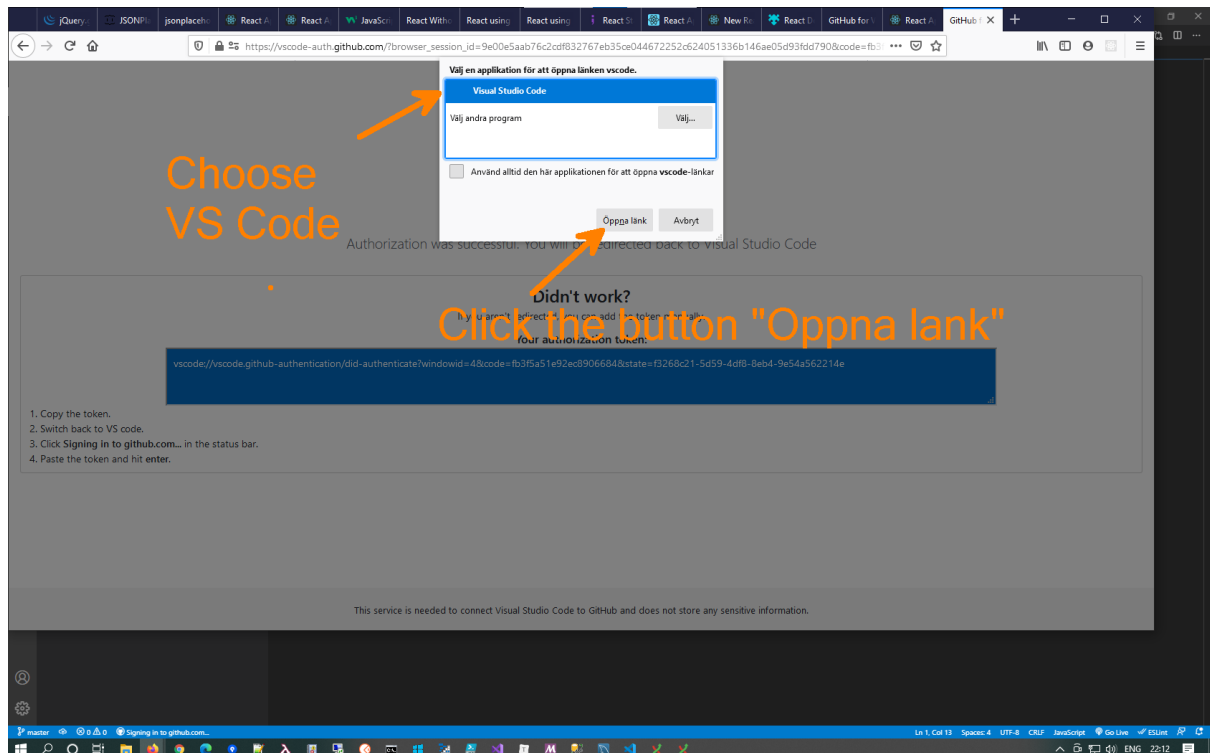

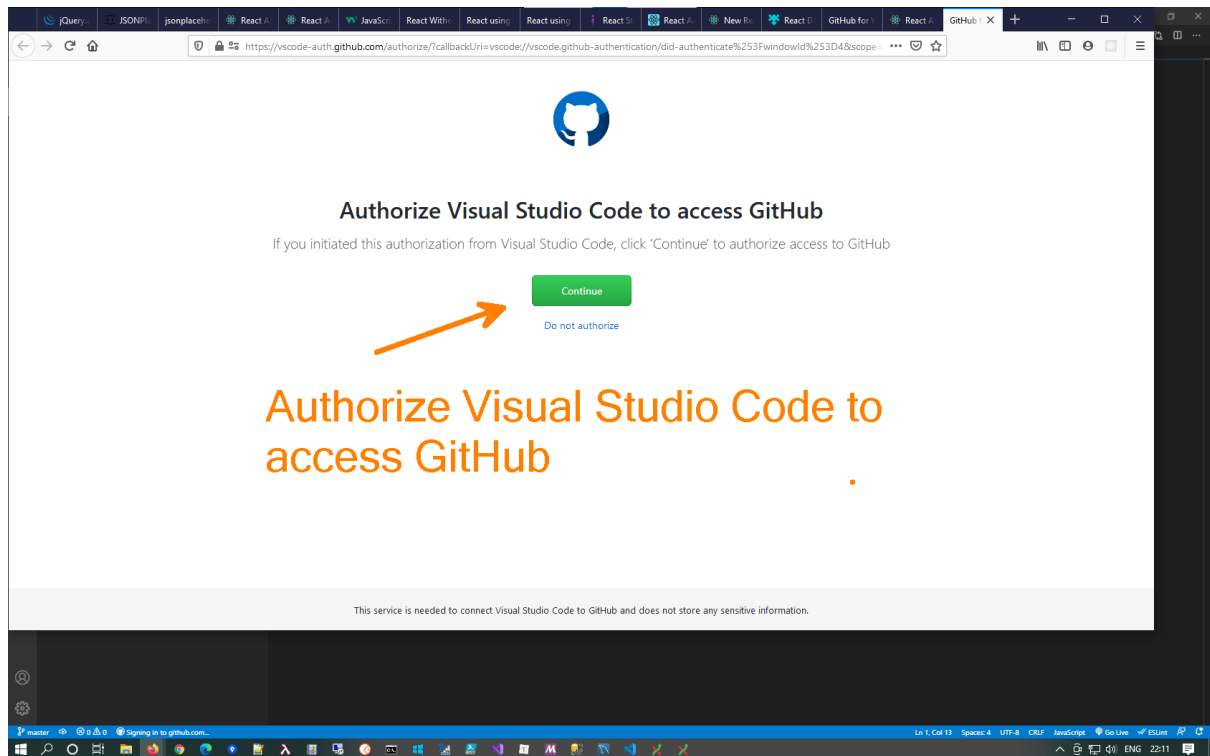

Staged changes are new, updated or deleted
files or folders in the folder that contains
the .git folder

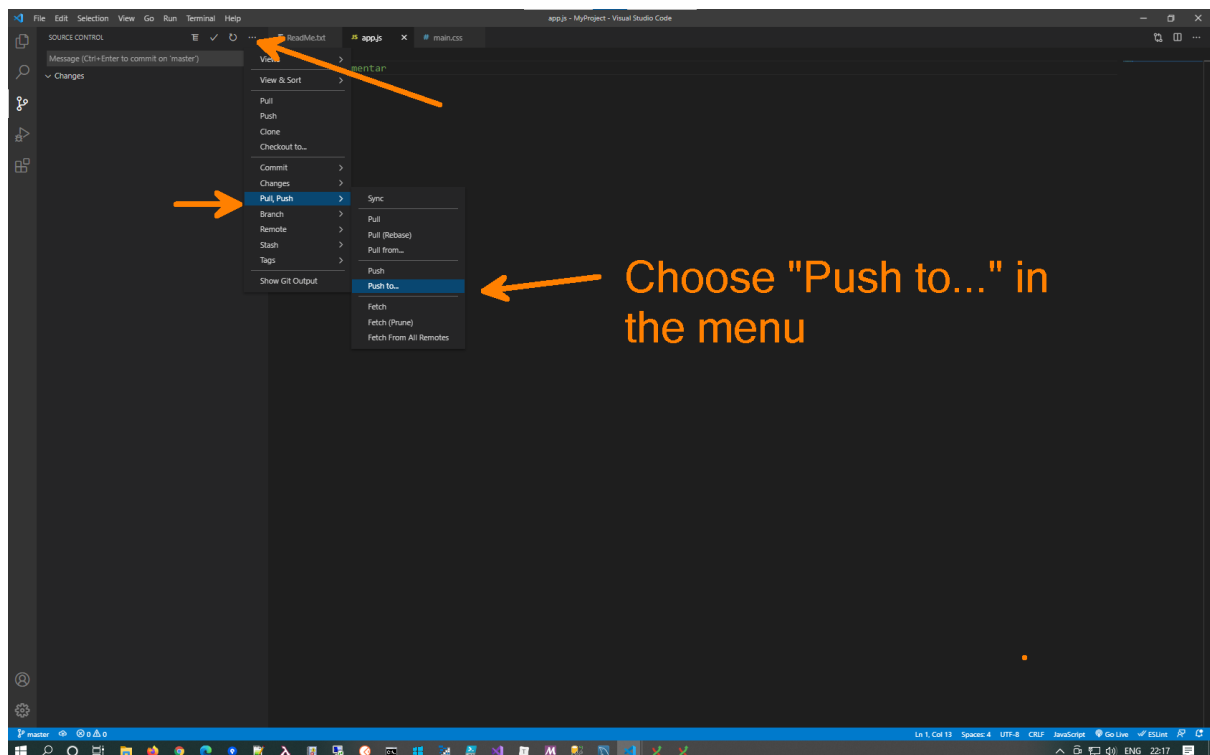

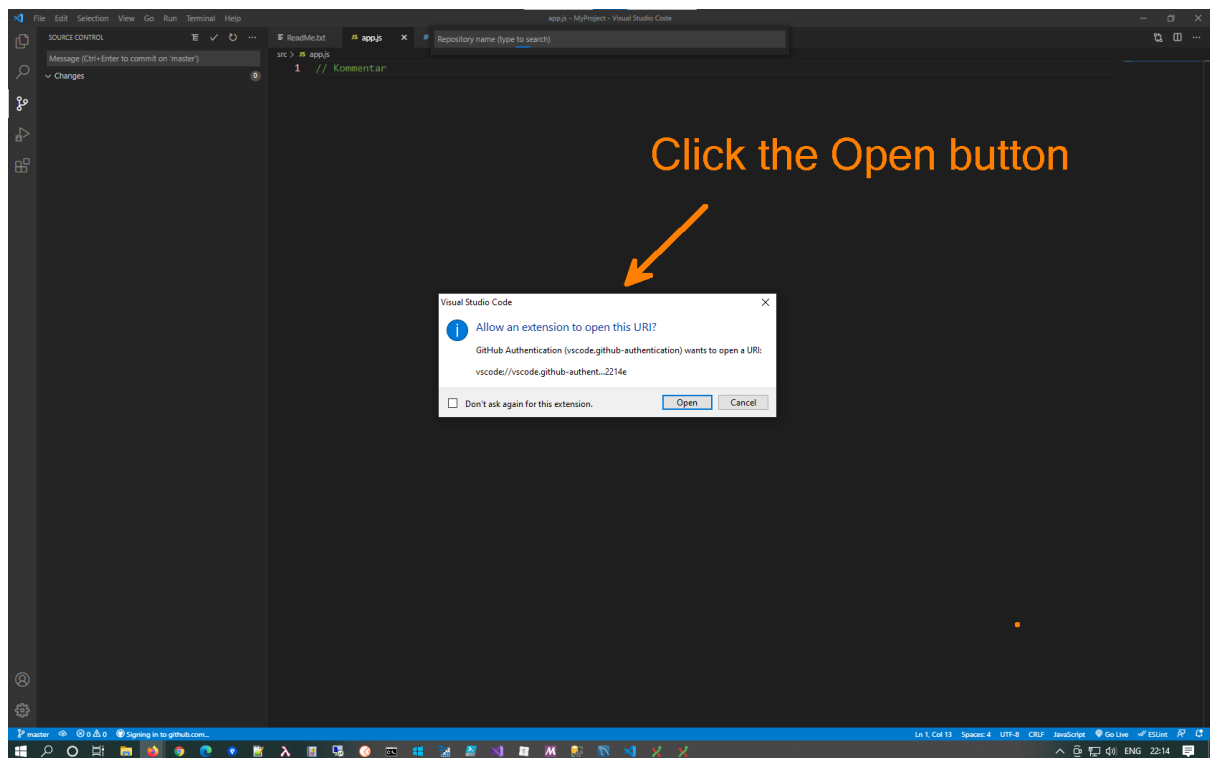

Files under Changes are un-staged which means that
they have not been added to GIT yet|
